The Hella Online Catalogue

Faster – better – more efficient

In addition to this catalogue you have the opportunity to research Hella products directly in the Internet catalogue. The functions have been adapted to the special requirements of an online enquiry. The major advantage of the Online Catalogue is that it is always up to date. New products are documented immediately.

No matter where you are when you start the product enquiry: the search system will get you to the right answer in the quickest possible way. The vehicle-independent search function has to be emphasised in particular. It allows you to research very quickly products which are for universal use.

As well as detailed basic facts the Online Catalogue offers additional information and links to further documents.

Type approval numbers E1 - E17

All Hella devices have E type approval.

Exceptions to this are devices with national type approval that are only marked for Germany and equipment for local authority vehicles.

See overview of type approval numbers in Chapter 9.

What does GGVS/ADR mean?

Some headlights and lights in the range are marked with this symbol. This means that these products are approved for mounting to transport equipment which complies with the requirements of GGVS/ADR B Rn 10251 and Rn 11251 for electrical equipment.

GGVS

Act governing the transportation of hazardous goods by road

ADR

Accord européen relatif au transport international des marchandises dangereuses par route

What do the IP protective ratings mean?

Protective rating IP5K4K

Dust may only penetrate to such an extent that function and safety are not impaired.

Water being sprayed against the housing at increased pressure may not have a harmful effect; water pressure approx. 4 bar.

Protective rating IP6K4K

Dust must not penetrate.

Water being sprayed against the housing at increased pressure may not have a harmful effect; water pressure approx. 4 bar.

Protective rating IPX9K

Water that is directed against the housing during high-pressure/steam jet cleaning may not have a harmful effect; water pressure approx. 80 bar.

Decisive for the specification of the protective rating are the splashwater test and the dust test.

The splash-water test provides information about how headlights, lights and beacons resist rain, splashwater, mud and high-pressure cleaners.

For this purpose, water is sprayed constantly onto the test specimen in a closed chamber as if through a high-pressure cleaner.

The dust test examines the degree to which the test specimen is protected against penetration by solid particles including dust.

For this purpose, the test sample is exposed to a flow of dust/air mixture for a certain length of time in the chamber.

Why work lights?

**Working at night -
no problem with the right headlights.**

Special headlight types have been developed for this purpose:
Low-beam headlights and spotlights:
for illuminating the road in road traffic.
Fog lights:
for poor visibility conditions in road traffic.
Work lights:
for the illumination of a working area near the vehicle and away
from public road traffic.

At the mounting height typical for work lighting (2.50 m), only
worklights provide sufficient illumination of the working area.
Standard vehicle lighting is nowhere near good enough!
Outstanding features of a good worklight include the
homogeneous illumination of as large an area as possible and
a soft transition at the edge.

Active safety through proper illumination!

It's not only the selection of the correct type of headlight that is
decisive for the choice of optimum worklight, but its correct
positioning on the vehicle, too. Worklights shine at an angle to
the surface they are illuminating. This means that even small
changes in the angle of inclination and the mounting height
have a great influence on the illumination of the working area.
For large-surface illumination, the higher the mounting position
the better.

**low
mounting position**

**high
mounting position**

Legal notes:

According to FMVSS § 52 (7) [Germany], all multi-track vehicles may be equipped with one or more worklights.

Worklights must not be used when these vehicles are being driven on public roads, only when they are at a standstill, e.g. during loading and unloading.

Exceptions to this are made for vehicles used for constructing, maintaining or cleaning the roads or for waste disposal vehicles, if the action of driving is part of a working process.

Worklights may only be switched on as long as they do not dazzle other road users.

Worklights must be able to be switched on independently of all other headlights or lights, e.g. joint circuitry with the reverse light is not permitted. Hella provides special reversing spotlights for this purpose.

There are no special approval regulations, e.g. according to ECE or EC, since worklights may only be used when driving away from public roads.

			Ultra-sonic headlight levellers (LWR) for 50 mm dia., 90 mm dia. and 100 mm dia. built-in Xenon headlights (see pages 4.30-4.36)
			Contents: 2 ultra-sonic sensors with mounting brackets, electronic control, 2 actuator motors, lead sets and installation instructions. Extra for 24V: 1 voltage reducer(2A) The ultra-sonic sensor can be mounted on the floor of the car with a bracket and connected to the central electronic control. This control transfers its adjustment values to the actuator motors on the headlights. The actuators then position the headlights in accordance with the specific load. If the vehicle height is reduced at the rear as well as the front axle when loaded, a second sensor is required. The control module is laid out for two-sensor operation.

Instruction 1

In connection with these low powers, which are very different from bulb versions, there can be problems with the bulb failure check during operation on various traction vehicles.
Since indicator failure checks are required by legislation, we recommend only operating the light in combination with an indicator control unit part no. "5DS 009 602-..., 5DS 009 552-... or LED flasher unit 4.. 009 492".
In addition, further lighting functions are detected by some traction vehicles. This is a vehicle comfort function which is not required by legislation and does not release drivers from their obligation to see for themselves that the lighting equipment is working. Here, too, faulty diagnoses can be a result of the lower power levels involved (instrument panel in the driver cab indicates a bulb failure although the function is working).
The functional ability of these light failure checks can only be established by the vehicle manufacturer.
The power specifications must be adapted to the respective lights!!!!
Operation of the light with alternating current or pulsed direct current is not permitted!
The functional ability of these light failure checks can only be established by the vehicle manufacturer.
The individual light functions may only be operated with a vehicle fuse of max. 3A.

Legal requirement in all ECE states

In the case of vehicles approved for use on public roads, the indicators must be monitored: The failure of an indicator must be shown optically or acoustically in the vehicle. This applies in all ECE states. In other words, the potential failure of the indicator must be monitored by the vehicle. Manufacturers use various failure control systems. The failure control systems currently in use cannot detect simple LED lights and displays a fault. All Hella LED indicators have integrated electronics for failure control. The indicators are selfmonitoring. They generate a pulse that is evaluated by the electronic ballast. The ballast simulates a 21W bulb, which makes operation with conventional flasher units possible. As soon as one single LED fails, the light can be considered faulty, the pulse is not generated. The ballast then switches the bulb simulation off and the flasher unit indicates the fault to the driver.

Safe conversion to LED indicators now possible thanks patented Hella electronics

Hella supplies electronic ballasts for all Hella LED indicators which make it possible to convert the indicator failure display for various vehicles. This is necessary if the vehicle manufacturer does not guarantee indicator bulb failure control via the vehicle wiring system. The method has been patented for Hella. At the moment, there are three different ballasts and several different LED indicator types available.

LED indicator failure control: Background information

Fig. 1

Why does the failure detection required by law work with various LED lights with some flasher units and not with others?

Fig. 1 illustrates the typical current pattern when a bulb is switched on. Different flasher units detect this in different ways, for example by
a) measuring the pulse peak or
b) measuring the current at some point during the switch-on pulse or
c) measuring the current after the pulse, when the current is constant and has a certain intensity, or
d) determining the total energy flowing through the light (size of area A)

Fig. 2

Fig. 2 shows the LED current (I LED) in relation to this. None of the methods mentioned above can work here, because there is neither a switch-on pulse available nor is the current intensity high enough or the total energy through both lights is identical (area B is as large as A).

Fig. 3

If a simple Ohmic resistor is inserted, e.g. a resistor cable, the current is increased by a certain value (IR) and the curve illustrated in Fig. 3 is the result. In this case, only a flasher unit according to principle c) would work. If the resistance is chosen somewhat higher, principle d) could also possibly work. If the light fails afterwards due to mechanical damage, the flasher unit could detect the insert resistor as a functional bulb. In this case, a light working perfectly would be indicated although this is not the case! This means: In this case the vehicle would lose this approval for use on public roads.

The only solution conceivable for universal use is one that works with all the flasher units on the market. As the above considerations have shown, this can practically only be guaranteed if the current pattern of a bulb is simulated exactly by means of an electronic circuit.

- I = Current
- t = Time
- 1 = Pulse peak
- 2 = Switch-on pulse
- 3 = Individual pulse
- 4 = Bulb
- 5 = LED

Since such a circuit is extremely complex, it is not possible to integrate this in the LED light. In order to be able to benefit from the advantages of LED lights despite this fact, a ballast is required to the circuit. This combination provides the perfect - and above all legally conform - solution to the problem.

Failure control for LED indicators

Hella patent for the perfect problem solution

Fig. 4

I = Current
t = Time
1 = Pulse peak
2 = Switch-on pulse
3 = Individual pulse
4 = Bulb
5 = LED

All Hella LED indicators with integrated electronics for failure control are self-monitoring and generate an individual pulse. This pulse is evaluated by the electronic ballasts. The ballasts simulate a 21 W bulb. This makes operation with conventional flasher units possible. If the light is faulty, which can be the case if only a single LED fails, the above-mentioned pulse is not generated. The ballasts then switch the bulb simulation off and the flasher unit indicates the LED fault to the driver.

By measuring the light current during a time window of 10 ms (Fig. 4), direct exchange between the Hella LED light and a bulb version is possible.

Hella ballasts are straightforward to convert even at a later date.

Vehicle manufacturers can also ensure ECE-conform failure control by evaluating the pulse of the Hella LED indicators shown in the adjacent diagram directly in their control units. The exact specification can be obtained from Hella.

Which Hella ballast for which vehicle?

1. Vehicles that use the cold scan for indicator failure control.

Description of fault indication:
Is a faulty light indicated when the ignition is switched on or directly when the fault occurs, or when the bulb is screwed out without the indicator being triggered?

Solution: Simulation device for cold scan

Part no.	Pk.	
5DS 009 602-011	1	Simulation device for cold scan, 12V
5DS 009 602-001	1	24V

2. Vehicles without flasher unit that carry out current measurement as failure control.

Description of fault indication:
Is a fault only determined during flashing (e.g. double flashing frequency)?

Solution: Indicator control unit

5DS 009 552-001	1	Indicator control unit for trucks and trailers, 24V, with one 15-pole EasyConn plug and one 15-pole Easy-Conn socket
5DS 009 552-011	1	Lead end with blade terminal contact 6.3 mm No separate power supply necessary. Protective rating: IP 6K9K

3. Vehicles with flasher unit

Solution: Replacement of the existing flasher unit by an LED flasher unit

4DN 009 492-101	1	LED-flasher unit, 12V 2+1+1
4DW 009 492-111	1	LED-flasher unit, 12V 3+1

OWS 7

Part no.	Pk.	OWS 7 Optical warning systems KL-LR2, 900 mm, 1000 mm, 1100 mm, 1400 mm, 1600 mm
		For medium-sized to large special-purpose vehicles from the areas of breakdown service, building and construction industry, heavy goods vehicles, street-cleaning vehicles, etc.
		Modular design with a length range from 900 mm to a possible 1600 mm for individual configuration possibilities. As auxiliary lighting systems, adjustable with two LED side-mounted lights for side illumination or integrated H3 worklights (facing the front or rear) can be optionally selected.
		With two clear PC domes and 2 x 2 reflectors with 30 amber LEDs each for amber light.
		Technical data:
		Rated voltage: 12V.
		Operating temperature: - 40 °C to + 60 °C.
		RF suppression: CISPR 25, class 3 (conducted).
		Resistant to high pressure cleaning.

Flashing Beacon and Siren Combinations

RTK 7 for police, fire brigade, rescue vehicles, ambulances

Part no.

Pk.

**Flashing beacon and siren combinations RTK 7
with LED trough module KL-LR2, 900 mm - 1600 mm**

Modular design with a length range from 900 mm to a possible 2200 mm for individual configuration possibilities. The whole system has a control concept that can provide conventional analogue signals or modern databus signals (CAN open acc. to CIA 447). As an alternative to the separate loudspeaker system, loudspeakers that can be integrated at the front and rear are also available. The system is rounded off by an intelligent, programmable control unit with display and built-in microphone.

With two clear PC domes and 2 x 2 reflectors with 24 blue LEDs each for blue light.

Technische Daten:

Rated voltage: 12V.
Supply voltage range: 9V < UBAT < 16V.
Quiescent current consumption: < 0,5 mA.
Undervoltage cutoff: < 9V - 0,5V.
Overvoltage cutoff: > 16V + 0,5V.
Load capacity: databus protocol < 0,3A,
control outputs < 0,3 A,
display outputs < 0,5A to 7A.
Operation: Digital using handheld type HA 112 or HA 115.
Databus protocol: CAN open according to CIA 447.
Operating temperature: - 40 °C to + 60 °C.
RF suppression: CISPR 25, class 3 (conducted).

Rotating Beacon and Siren Combinations

RTK 6-SL for police, fire brigade, rescue vehicles, ambulances

Part no.	Pk.	Rotating beacon and siren combinations, RTK 6-SL The modular design of the RTK 6-SL allows the basic version to be equipped with various accessory modules right up to the maximum version to meet all ranges of application. The microprocessor-controlled central control unit and electronic bus system significantly reduce the vehicle wiring and facilitate installation. The entire system can be completed with an intelligent control unit. Erroneous operation as well as malfunctions in the system are indicated optically and acoustically. Light aperture (reflector dia.): 111.6 mm. The RTK 6-SL fulfils all legal regulations for acoustic and optical warning devices in accordance with specifications to ECE and ISO. Technical data: Rated voltage: 12V. Operating voltage: 9V - 16V at 12V. Quiescent current consumption: 1.0 mA. Operating temperature: -40 °C to +60 °C. RF suppression: CISPR 25, class 5 (conducted). Resistant to high pressure cleaning. Weight: max. 22 kg. Power consumption: Rotating beacons (2 or 4 per system): 5.0A at 12V. Strobe-type beacons (2 per system): 4.5A at 12V. Attachable rotating beacon: 4.5A. Loudspeaker, front: 5.5A. Loudspeaker, rear: 2.5A.

Rotating Beacon and Siren Combinations

RTK-QS for police, fire brigades and rescue vehicles

Part no.	Pk.	Rotating beacon and siren combinations RTK-QS with single reflector system KL-ER, 1100 mm, 1400 mm, 1600 mm, 1800 mm, 2000 mm

The modular and flexible set-up allows the RTK-QS to be designed tailor made to customer requirements. The variable lengths make the unit particularly suitable for large official vehicles. Five different widths are available with light domes in the colour combinations blue / blue.

The control concept for this system processes conventional, analogue signals as well as modern data bus systems (e.g. CAN bus). Control of the system is accomplished optionally with the eAZD control unit, standard button or vehicle interface. As an option to the two speakers pointing forward, a third speaker pointing to the rear is also available.

Light aperture (reflector dia.): 84 mm.

Technical data: Rated voltage: 12V / 24V. Operating voltage: 10.8V - 15V at 12V, 21.6V - 30V at 24V. Function voltage: 10V - 16V at 12V, 20V - 32V at 24V. Undervoltage: 12V <10V, 24V <20V. Overvoltage: 12V >16V, 24V >32V. Quiescent current consumption: <- 1 mA. Operating temperature: - 40 °C to + 60 °C. RF suppression: CISPR 25, class 5 (conducted). Resistant to high pressure cleaning. Weight: max. 22.5 kg.	Current consumption of modular equipment: KL-ER (2 per system): 5.5A at 12V, 3.0A at 24V. Side-mounted lights: 4.5A at 12V, 2.7A at 24V. Loudspeaker front: 1.7A at 12V / 24V. Loudspeaker rear: 1.7A at 12V / 24V.

Configuration possibilities:
Voltage: 12V / 24V.
Type of control: analogue/CAN.
Width: 1100 / 1400 / 1600 / 1800 / 2000 mm.
Light systems main beacons: KL-ER single reflector system.
Optional light modules (exterior): Side mounted lights Alley Lights, connection lead for one 3rd and 3rd and 4th beacons.
Light dome colours: blue / blue.
Loudspeakers: towards front, towards front and rear.

Flashing Beacon and Siren Combinations

RTK-QS for fire brigades and rescue vehicles

Part no.	Pk.	Flashing beacon and siren combinations RTK-QS with parabolic trough reflector system KL-XR2, 1100 mm, 1400 mm, 1600 mm, 1800 mm, 2000 mm The modular and flexible set-up allows the RTK-QS to be designed tailor made to customer requirements. The variable lengths make the unit particularly suitable for large official vehicles. Five different widths are available with light domes in the colour combinations blue / blue. The control concept for this system processes conventional, analogue signals as well as modern data bus systems (e.g. CAN bus). Control of the system is accomplished optionally with the eAZD control unit, standard button or vehicle interface. Technical data: Rated voltage: 12V / 24V. Operating voltage: 10.8V - 15V at 12V, 21.6V - 30V at 24V. Function voltage: 10V - 16V at 12V, 20V - 32V at 24V. Undervoltage: 12V <10V, 24V <20V. Overvoltage: 12V >16V, 24V >32V. Quiescent current consumption: </- 1 mA. Luminous power: >= 350 cd. Integrated polarity reversal protection. Operating temperature: - 40 °C to + 60 °C. RF suppression: CISPR 25, class 5 (conducted). Resistant to high pressure cleaning. Weight: max. 26 kg. Configuration possibilities: Voltage: 12V / 24V. Type of control: analogue/CAN. Width: 1100 / 1400 / 1600 / 1800 / 2000 mm. Light systems main beacons: KL-XR2 parabolic trough reflector sysrtem with 8 different flash frequencies and integrated day / night change-over.. Optional light modules (exterior): Side mounted lights Alley Lights, connection lead for one 3rd and 3rd and 4th beacons. Light dome colours: blue / blue. Loudspeakers: towards front. Current consumption of modular equipment: KL-XR2 (2 per system): 4A at 12V, 1.8A at 24V. Side-mounted lights: 4.5A at 12V, 2.7A at 24V. Loudspeaker front: 1.7A at 12V/24V. Loudspeaker rear: 1.7A at 12V/24V. Control units/roof attachment interface Unidirectional NF-BU: 5V 100 kHz.

*) With wiring harness for connection of one 3rd or 3rd and 4th beacon (including switching and monitoring functions).
**) The light/acoustic module ZSE L/A allows, as central control unit with programmable microcontroller, operation of 4 light modules as well as various alarm sequences. For model versions with more than 4 light modules, the control unit can be supplemented with an additional ZSE L electronic module for up to 6 light modules.
***) With loudspeaker cable for external installation

Part no.	Pk.	Beamsetters for testing all types of headlights systems
		SEG IV DLX With digital luxmeter. The laser positioning aid makes precise alignment of the beamsetter box to the headlight possible. This means that bulbs can be sighted directly, particularly for free-form headlights. Eccentric axle and spirit level to compensate uneven surfaces. With a deflection mirror to enable the test monitor to be seen from behind.
8PA 007 732-083	1	SEG IV DLX Contents: beamsetter box, broad-band sight and wheel-mounted base
8XT 861 234-003	1	Column (to be ordered separately), 1.2 m long
8PA 007 732-093	1	Same as SEG IV DLX, but without eccentric axle and spirit level
		SEG IV DL Contents: beamsetter box, broad-band sight and wheel-mounted base
